MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Jun 12 11:53:42 1998; MasPar time 21.43 Seconds 974.872 Million cell updates/sec

Tabular output not generated.

Title: >US-08-083-590A-2
Description: (1-833) from US08083590A.pep (1 of 2)
Perfect Score: 6164

Sequence: 1 MHWIKCLLTAFICFTVIVQV......GSGAGTAQQQRSVVCGTPHM 833
Scoring table: PAM 150
Gap 11

Searched: 69111 seqs, 25083644 residues
Post-processing: Minimum Match 0%

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swiss1

Statistics: Mean 50.001; Variance 79.902; scale 0.626

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: NOTCH 1, 2 AND 3 PLAY A COMBINATIONAL ROLE DURING VARTOUS CELL FATE DECISIONS AND MORPHOLOGICAL MOVEMENTS IN T DEVELOPING CNS AND PROBABLY OTHER REGIONS OF THE EMBRYO. TISSUE SPECIFICITY: PROLIFERATING NEUROEPITHELIUM.

DEVELOPMENTAL STAGE: CNS DEVELOPMENT.
SIMILARITY: CONTAINS 34 EGF-LIKE DOMAINS.
SIMILARITY: CONTAINS 3 LIN/NOTCH REPEATS.
SIMILARITY: CONTAINS 5 CDC10/SW16 REPEATS.
SIMILARITY: CONTAINS 6 CDC10/SW16 REPEATS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SUBCELLULAR LOCATION: EXTRACELLULAR.

DEVELOPMENTAL STAGE: LOW LEVELS IN UNFERTILIZED EGGS AND DURING EARLY CLEAVAGE, THEN RAPIDLY INCREASES IN ABUNDANCE BETWEEN LATE MORULA AND MESENCHYME BLASTULA STAGES TO MAXIMAL LEVELS MAINTAINED THROUGH SUBSEQUENT STAGES.

EXPRESSED BOTH MATERNALLY AND ZYGOTICALLY.

SIMILARITY: CONTAINS 8 EGF-LIKE DOMAINS.

SIMILARITY: CONTAINS 1 CUB DOMAIN.

SIMILARITY: THE C-TERMINAL DOMAIN OF THIS PROTEIN IS SIMILAR TO AVIDIN/STREPTAVIDIN.

Statistics: Mean 31.938; Variance 122.652; scale 0.260

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Disclosure; Page 85; 119pp; English.
Delta encodes an approx. 100 kd protein (Delta denotes 'DLZM', the protein product of the predominant zygotic and maternal transcripts) that has nine EGF-like repeats within its extracellular domain. Molecular studies have lead to the suggestion that Notch and Delta constitute biochemically interacting elements
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 30-NOV-1993 (first entry)
